

Company Overview

For more than 40 years, Wilson Electronics has remained a leader in wireless communication technologies. For the past 10 years the company has focused on helping cellular users improve their cellular service and reduce dropped calls. The company designs and manufactures easy to install antennas and amplifiers that improve a cellular phone or air card's performance. Wilson bi-directional amplifiers deliver higher power and have better receiver sensitivity than competing solutions currently available. The result: Wilson Electronics' cellular amplifiers and antennas empower users to stay within reach in both building and mobile environments.

Wilson pioneered cellular handset signal enhancement and has consistently led the industry in performance standards. Wilson holds a number of patents including the industry's best and most reliable method of oscillation prevention and carrier cell site protection, an area where most competitors fall short. The company's designs consistently outperform the competition in specifications as well as real world performance.

Wilson's U.S. based design and manufacturing allows the company to maintain the highest standards of quality. All products undergo 100 percent automatic testing, with real time test results monitored by our engineering department. Wilson is so confident in their products performance that the company offers customers a money back guarantee.
