Got a GSM phone? Good news for you! Wilson Electronics announces a *new* Direct Connection Dual-Band Amplifier for GSM and TDMA Carriers

Enhances performance with up to 3 watts output power, improves data communication rates

St. George, UT - 2007 – Wilson Electronics, a leading manufacturer of cellular amplifiers and antennas, announces a *new* model of its direct connection dual band (GSM/TDMA) amplifier. The new amplifier brings up to 3 watts of output power to cell phone and cellular data card users with GSM and TDMA carriers on the 824-894 MHz Cellular and 1850-1990 MHz PCS bands. This new signal booster provides improved voice and data signal quality and increased data communication rates for GSM and TDMA carriers.

“GSM and TDMA systems have different requirements than CDMA networks. said Alan Van Buren, Wilson electrical engineer. The new direct connection dual band amplifier’s design will give cell phone and cellular data card users a dramatic increase in performance, both in signal quality and improved data throughput.”

Like all Wilson direct connection amplifiers, the dual band GSM/TDMA amplifier physically connects to the cell phone or cellular data card with a coaxial cable and a device-specific Wilson external antenna adapter. Because it is a direct connection, no signal is lost to the atmosphere. All of the signal energy is transferred outside the vehicle or building through the external antenna.

When operating in conjunction with an external antenna, the easy-to-install GSM/TDMA signal booster substantially improves the voice and data signal quality for cell phones or cellular data cards and works on all generations of CDMA, TDMA, GSM and the latest 3G data technologies.

Wilson amplifiers house a superior receiver than what is found in a cell phone or laptop cellular data card. Its advanced electronics are ultra sensitive and able to receive small signals that would go undetected by most devices. It also contains a better transmitter allowing for substantially improved voice and data communication with distant cell sites.

Wilson’s dual band GSM/TDMA amplifier works great on cars, trucks, boats, RVs and many other applications. It can also be adapted for home or office use. The package includes a 12 volt dc power cord with a cigarette lighter adapter and a 1.8-meter coaxial extension cable with an FME-Female connector on each end.

For more information about Wilson’s new products, or product samples for review, visit them at the CTIA Wireless 2007, Booth #5563 in the West Building, Hall D-1 (near the CTIA Wireless Building).

About Wilson Electronics Inc.

Located in St. George, Utah, Wilson Electronics, Inc. has been a leader in the wireless communications industry for nearly 40 years. With expertise in RF antenna and amplifier research and development, the experienced Wilson engineering team uses a state-of-the-art testing laboratory, including an anechoic chamber and network analyzers, to fine tune antenna designs and performance. For our amplifiers, we use double electrically insulated RF enclosures and cell site simulators for compliance testing. Manufactured in the USA, all Wilson products are designed and tested to the highest quality standards possible. For more information, please call (800) 204-4104, email info@wilsonelectronics.com or visit www.wilsonelectronics.com.
