

Wilson Electronics Sleek Scores High Marks in CNET Review

Wilson's newest, most affordable cell phone signal booster gets 4 stars out of possible 5, and is now available

St. George, Utah – April 22, 2010 – Wilson Electronics (www.WilsonElectronics.com), manufacturer of North America's top-selling product line of [cell phone signal boosters](#), further solidified the company's industry-leading position with high marks in a recent CNET review of its newest product, the Sleek.

The CNET editors' review gave the Sleek an "Excellent" rating, with 4 (of a possible 5) stars. The review lauded the Sleek's simple setup and compact form factor. It also noted in areas of consistently poor reception in San Francisco the Sleek provided increased cell phone range and improved signal.

"Setup for the Sleek is painless," said Kent German in his [review](#) of the Sleek on CNET. "The Sleek's primary part is the phone cradle that's also the actual signal amplifier. On the whole, the cradle has a sturdy feel and its basic black color shouldn't clash with your car's interior. It measures 4.25 inches long by 2.5 inches wide by 2.25 inches deep and weighs 2.5 ounces."

The affordable and high performance [Sleek](#) is priced at half the cost of comparable signal boosters, without compromising on power. Designed for a single user, for use in a vehicle, or with an optional accessory package in the home or office, the Sleek is now available with a manufacturer's suggested retail price of \$129.95.

"We noticed the biggest change when using AT&T and Sprint phones, though a T-Mobile device showed improvement as well," added German. "In most cases we had a stronger signal with fewer fade-outs and dropped calls. Problem areas weren't eliminated completely, but our conversations sounded better and we didn't encounter any interference."

"CNET is one of the most recognized and respected names in technology product reviews, and we're honored that they recognized the Sleek as a leader in our space," said Joe Banos, Wilson Electronics COO. "We have been in the communications business more than 40 years, and we continue to grow because we focus on making excellent products that people want."

The Sleek is now available at Amazon.com and other electronics retailers.

About Wilson Electronics, Inc.

Wilson Electronics, Inc., a leader in the wireless communications industry for more than 40 years, designs and manufactures a [wide variety of cell phone signal boosters](#), antennas and related components that significantly improve cellular communications. It has designed solutions for poor cellular reception in mobile, building and machine-to-machine (M2M) applications. All Wilson products are engineered, assembled and tested

in the company's U.S.-based headquarters. Wilson amplifiers fully comply with FCC regulations for cellular devices and are FCC and Industry Canada type accepted. Wilson Electronics has developed and patented microprocessor-controlled signal booster (or amplifier) technology, which protects cell towers from interference.
